criteria (census block), but for other areas we are seeking a third data source to corroborate the citizen's map or the provider data. We are also creating one on our own. That is being done by using address points to model the likelihood that a cable company would provide service on individual road segments.

Additionally, since July of 2010, the NYS Broadband Mapping Team has been receiving independently collected speed data through a joint effort with the Center for Technology in Government (CTG). A web-based application uses "crowd sourcing" to survey and collect information regarding NYS users' access to broadband services. It allows users to run a speed test to identify the actual broadband speeds they experience at the time the test is taken. The speed data, provider name, technology used and the location where the test was taken are being captured. The data is being used to assist with the verification of information received directly from providers. 8741 NYS residents had taken the speed test as of the end of this reporting period.

10f. Please describe the verification activities you plan to implement

As previously reported, we plan to use Automatic Vehicle Location (AVL) data from State Trooper patrol vehicles to identify dead zones in Verizon's reported wireless service areas. We are in the process of obtaining the data from the Division of State Police. Our objective is to refine our Verizon wireless polygons for our October 1, 2012 SBI deliverables.

In June of 2012, we received training from our Public Utilities Commission on how to use Google Street View to identify the presence of coaxial cable and residential Fiber-to-the-Home on utility poles. We have begun looking at "questionable areas" of availability reported by providers. Our objective is to refine cable data for our October 1, 2012 deliverables.

We also analyzed the results returned in the NTIA Assessment Geodatabase. The results have helped us identify provider supplied data that needs further verification. This information will be used to improve future provider outreach activities and potentially steer us in the direction of new verification activities.

Lastly, we are using the modeled cable availability data described in 10e above, Google Street View, central office locations and DSLAM locations to help us identify partially served census blocks. We intend to add a field to the census block level availability data to identify partially served blocks with the eventual goal of differentiating fully served and partially served blocks on the NYS Broadband Map. We anticipate having some partially served block data developed for our October 1, 2012 deliverables and plan to identify partially served blocks on the NYS Broadband Map in October or November of 2012.

Please refer to the Q2 2012 Supplemental Answers Document for additional details.

10g. Have you initiated verification activities? •Yes ONo

10h. If yes, please describe the status of your activities

This information was also supplied in NY's April 1, 2012 Methodology Paper and is unchanged from the Q1 PPR

Verification List:

1. Automated tools

- a. Domain and topology rules in delivery geodatabase
- b. Submission scripts
- c. Feature dataset cross checks
- 2. Provider website research
- 3. Crowd-sourced data
- a. NYS Speed Test data points
- b. FCC Speed Test records
- c. NYS Broadband Map feedback
- 4. Use of government data sources
- a. FCC Aggregated 477 Data
- b. NYS DMV data
- c. NYS Lottery terminal data
- d. NYS Streets and Address ranges
- e. NYS Address Points
- f. NYS Orthoimagery
- g. NYS Public Service Commission Cable Franchise Agreements data
- 5. Commercial data sources
- a. TomTom Data ILEC, CLEC and Rate Center Exchange Boundary data
- b. Online look up tools for middle mile & central office locations
- c. NAVTEQ address points
- d. Pictometry oblique aerial imagery/Google's Street View
- e. APNIC Whois database (publicly available IP Address search engine)

6. Select Community Anchor Institution (CAI) locations

- 7. Provider verification maps
- 8. Clip wireless data to NYS Boundary
- 9. Removal of 'uninhabited areas'
- 10. Other Grantee State Broadband Maps and National Broadband Map
- 11. Broadband Organizations: NYSTA, CTANY, WISPA

For details concerning these verification activities, please refer to the Q2 2012 Supplemental Answers Document. 10i. If verification activities have not been initiated please provide a projected time line for beginning and completing such activities

Please see 10f for details regarding additional planned verification activities.

Staffing

10j. How many jobs have been created or retained as a result of this project?

12.08

10k. Is the project currently fully staffed? OYes ONo

101. If no, please explain how any lack of staffing may impact the project's time line and when the project will be fully staffed Currently, the two areas of NY's broadband program impacted by less than full staffing are the Capacity Building project and Address Point File project. The Capacity Building project is supposed to be staffed with two full-time employees. The Outreach Coordinator position was filled on April 17, 2012. There are plans to either contract for the Project Manager position or transition the part-time Director position to full-time and switch that salary and fringe from matching funds to federal funds. There appears to be sufficient surplus matching funds so that would be possible without a negative impact to NY's 20% match requirement. Regarding the project time line, the Director is currently researching vendors who may be able to provide some of the services originally planned to be performed by in-house staff.

For the Address Point file project, the project team will be releasing a Request for Proposal during Q3 of 2012. The selected vendor will supply the staffing to bring us to the overall estimated total of 18 FTEs. The vendor's work creating address points will be scheduled for completion by September 30, 2014.

As reported for the last two quarters, difficulties in staffing have had a significant negative impact on overall grant spending. The budgets of all four projects funded under New York's SBI grant have large components for personal services and fringe as well as contracted staff resources. Now that all planned in-house hiring has been completed, the future spending rate will begin to be more in line with our original project plan estimates.

10m. When fully staffed, how many full-time equivalent (FTE) jobs do you expect to create or retain as a result of this project?

18

Hardware / Software

10u. Has the project team purchased the software / hardware described in the application?

10v. If yes, please list

Software and hardware purchases have been made in prior quarters (the last on June 20, 2011) but there were no new software and hardware purchases this reporting period.

10w. Please note any software / hardware that has yet to be purchased and explain why it has not been purchased

The most notable software and hardware purchases not yet made are for the Address File Development project. This project has a requirement for a public-facing application for the creation and maintenance of address point data by in-house staff and county 911 staff. Due to internal application development resource constraints and time constraints, the project team is currently evaluating commercial-off-the-shelf (COTS) solutions for this software application. Related potential software and hardware purchases will be identified once the COTS solution is determined. Additionally, there will be future software and data license renewal costs and the potential for miscellaneous "utility" software purchases to support day to day operations.

10x. Has the project team purchased or used any data sets? (•Yes (No

10y. If yes, please list

There have been data purchases made in prior quarters but there were no new data purchases this reporting period.

10z. Are there any additional project milestones or information that has not been included?
()Yes ()No

10aa. If yes, please list

NYS will use the answer to question 10z to report on progress of additional projects funded under the amended award as measured against the Project Budget, Milestones and Dependent Activities, and Time-line document submitted in response to SAC 15 of our supplemental grant award.

Please see item 10aa in Q2 2012 Supplemental Answers Document.

10bb. Please describe any challenge or obstacle that you have encountered and detail the mitigation strategies the project team is employing

Our primary challenge remains the shortcomings associated with the census block level availability data and the lack of an effective method of identifying and editing overstated availability reported by large, multi-state providers. For the latter, we have identified verification methods for identifying overstated and/or incorrectly reported availability but they are time and labor intensive and impractical for addressing the problem statewide within the time frame of the SBI grant period. A number of NY's national providers have very large footprints within the state and it would take thousands of man hours to identify and correct all the errors that likely exist. Nevertheless, we are moving forward with these verification methods (described in answers to 10e & 10f above) with a focus on areas that border our currently known unserved areas within national provider service territories. Our goal is the expansion of those polygons to represent a more accurate picture of these critical areas. We are also in the process of purchasing data sets from GeoTel Communications that contains a rich collection of metro and long haul fiber routes. This fiber is almost exclusively used to serve commercial customers, with service order windows well outside of 7-10 business days. While this availability does not meet the SBI availability specification, it will be extremely valuable in support of the development of NY's overall broadband strategy, current economic development efforts and the evaluation of NYS Broadband Grant applications.

NY is also proceeding with our Address File project which will provide accurate structure level data to assist with identifying errors in the provider reported data and hopefully make possible address level availability mapping and statistical analysis in the future.

10cc. Please provide any other information that you think would be useful to NTIA as it assesses your Broadband Mapping Project

The total federal amount of ARRA funds received through drawdowns did not change from the previous quarter due to coding errors within a new electronic statewide financial system deployed at the beginning of Q2 2012. The coding errors caused the total expenditures "earmarked" for federal ARRA reimbursement to be reported as zero. The error has been identified and corrected. The Q2 2012 expenditures that were not reimbursed will be accounted for in Q3 2012 drawdowns.

11. Broadband Planning

11a. Please describe progress made against all goals, objectives, and milestones detailed in the approved Project Plan. Be sure to include a description of each major activity / milestone that you plan to complete and your current status

As reported in the Q3 2011 PPR, all remaining planning activities were reassigned to the Broadband Mapping and Broadband Capacity Building projects. The progress for those activities was reported on through our status updates for Broadband Mapping and Broadband Capacity Building elsewhere within this PPR.

11b. Please describe any challenge or obstacle that you have encountered and detail the mitigation strategies the project team is employing

As reported in the Q3 2011 PPR, all remaining planning activities were reassigned to the Broadband Mapping and Broadband Capacity Building projects. The respective challenges associated with those activities were reported on through our status updates for Broadband Mapping and Broadband Capacity Building elsewhere within this PPR.

11c. Does the Project Team anticipate any changes to the project plan for Broadband Planning? (Yes No

11d. If yes, please describe these anticipated changes. Please note that NTIA will need to approve changes to the Project Plan before they can be implemented

Funding

11e. How much Federal funding has been expended as of the end of the last quarter?\$011f. How much Remains?									
11g. How much matching funds have been expended as of the end of last quarter? \$0 11h. How much Remains?
