The web survey is a replacement to the previously planned telemarketing program. It was determined that a web survey would be a more efficient and readily acceptable to participants. The University of the Virgin Islands (UVI) will be engaged by the PFA to validate the survey technique and perform an analysis of the results.

The performance tests are being modified to be compatible with the new web-survey. The system works well now, and the process of gathering actual performance data will begin in the next quarter and run for 60 days for the first verification sample. It has been decided to allow the measurements to run continuously for the two year period, although the venue may change. The USVI plans to deploy a Comprehensive Community Infrastructure middle mile network, which ultimately will be the point of measurement for the performance tests (a central operation point). Quality of service as well as speed will then be measurable in the more comprehensive program.

10i. If verification activities have not been initiated please provide a projected time line for beginning and completing such activities

June 2011

Staffing

10j. How many jobs have been created or retained as a result of this project?

3.25 FTE

10k. Is the project currently fully staffed?

Yes

No

10l. If no, please explain how any lack of staffing may impact the project's time line and when the project will be fully staffed

n/a

10m. When fully staffed, how many full-time equivalent (FTE) jobs do you expect to create or retain as a result of this project?

n/a

10n. Staffing Table

Job Title	FTE %	Date of Hire
Project Manager	100	10/01/2010
GIS Team Leader/Analyst	100	10/01/2010

Hardware / Software

10u. Has the project team purchased the software / hardware described in the application?		● No
10v. If yes, please list		
n/a		
10w. Please note any software / hardware that has yet to be purchased and explain why it has	not been	purchased
The purchase of the following software and hardware is planned for the next quarter	with the I	launch of the verification system:

Server for operating the Probe/Verification software

Server for the State Broadband website and user survey

Visualware (or similar) software for operating the verification probe

10y. If yes, please list

he Google Earth and CAD data to be provided as In-Kind contributions from WAPA have all been received and used extensively during the identification and location of anchor tenants, towers, and other points of interest.

Avensa MAPdataUSA has been purchased.

10z. Are there any additional project milestones or information that has not been included?

No

10aa. If yes, please list

The performance test website is scheduled to begin controlled verification on December 1, 2010. Collection of performance data will begin December 1, 2010 and proceed until sufficient data is received. In the beginning of this process we anticipate that the "busy hour" and the actual rates stratified throughout the region will be determined. The delivery of data free of qualifications relative to verification is now scheduled to be made with the first quarterly update in January, 2011.

10bb. Please describe any challenge or obstacle that you have encountered and detail the mitigation strategies the project team is employing he direct inspection of the anchor tenant is complete and accurate as of the current period. Please note that anchor tenant locations are subject to change overtime and will be modified accordingly with each succeeding period.

The web survey is a replacement to the previously planned telemarketing program. It was determined that a web survey would be a more efficient and readily acceptable to participants. The University of the Virgin Islands (UVI) will be engaged by the PFA to validate the survey technique and perform an analysis of the results.

The performance tests are being modified to be compatible with the new web-survey. The system works well now, and the process of gathering actual performance data will begin in the next quarter and run for 60 days for the first verification sample. It has been decided to allow the measurements to run continuously for the two year period, although the venue may change. The USVI plans to deploy a Comprehensive Community Infrastructure middle mile network, which ultimately will be the point of measurement for the performance tests (a central operation point). Quality of service as well as speed will then be measurable in the more comprehensive program.

10cc. Please provide any other information that you think would be useful to NTIA as it assesses your Broadband Mapping Project

n/a

11. Broadband Planning

11a. Please describe progress made against all goals, objectives, and milestones detailed in the approved Project Plan. Be sure to include a description of each major activity / milestone that you plan to complete and your current status

he primary goal of the planning activity has been to establish the process for deploying a comprehensive broadband middle mile network for the USVI. Critical to the success is the application for BTOP funds to support this launch in the region. Therefore, the primary objectives of the Broadband Planning Project are to prepare for the submission of the Round Two CCI proposal and to prepare the public-private partnership that will oversee the operation as deployment and operation proceeds.

The market, technical, and business questions in the actual application guidelines formed the overriding outline of the requirements. Although not available at the beginning of the SBDD program, the plan from the outset was to prepare appropriately and then adjust to develop the required plans.

The first step was to convene meeting with the key stakeholders and providers. The key stakeholders represent all the anchor tenants and they refer to themselves as the USVI Broadband Coalition. This was done prior to even submitting the proposal for SBDD funds. The second step was to convene the Technology Team from recommendations made by members of the two initial groups. Over 100 individuals have been interviewed from all the key groups. From these interviews two separate tracks were formed: one for business matters and one for technical matters. It was primarily from the stakeholders that the market assessment data was synthesized. Secondary research was gathered, but it was the goals and aspirations of the actual users of the system that most guided the assessment process. The initial findings went directly I to the market section of the BTOP CCI proposal.

Separately members of the Technology Team and the Office of Economic Opportunity began to gather technical data from industry relative to technology that might be used to design a broadband environment for the USVI.

11b. Please describe any challenge or obstacle that you have encountered and detail the mitigation strategies the project team is employing

There have been few challenges or obstacles encountered. Due to the size of the number of people involved, there is the natural problem of getting input from all groups synchronized, but the involvement of the Governor's office and normal program management follow up have produced all the inputs needed for the time lines required.

11c. Does the Project Team anticipate any changes to the project plan for Broadband Planning?	ning? (Yes	? (?	a?	nin	anı	Pla	hr	an	ha	dŀ	າລເ	3ro	· R	or	ո f	lar	n	ct	ie	r٥	n	e	th	n	s t	es	าต	ar	h:	C	n۱	а	te	าล	cir	ntid	an	ıa	am	ea	Te	T	ct	ec	oie	٥r	F	e	th	s i	he)n	\Box	C	11	1
---	------------	-----	---	----	-----	-----	-----	----	----	----	----	-----	-----	-----	----	-----	-----	---	----	----	----	---	---	----	---	-----	----	----	----	----	---	----	---	----	----	-----	------	----	----	----	----	----	---	----	----	-----	----	---	---	----	-----	----	----	--------	---	----	---

11d. If yes, please describe these anticipated changes. Please note that NTIA will need to approve changes to the Project Plan before they can be implemented

With the three BTOP proposals launched and the operation of the USVI Broadband Coalition and Technology Team underway, we do not see any changes to the current project plan for broadband planning. These relatively autonomous groups continue to operate and are integral inputs to the Virgin Islands Next Generation Network movement.

Funding

11e. How much Federal funding has been expended as of the end of the last quarter? \$0 11f. How much Remains? \$0 11g. How much matching funds have been expended as of the end of last quarter? \$0 11h. How much Remains? \$0

Additional Planning Information

11j. Are there any additional project milestones or information that has not been included?

n/a

11k. Please describe any challenge or obstacle that you have encountered and detail the mitigation strategies the Project Team is employing

There have been few challenges or obstacles encountered. Due to the size of the number of people involved, there is the natural problem of getting input from all groups synchronized, but the involvement of the Governor's office and normal program management follow up have produced all the inputs needed for the timelines required.

11I. Please provide any other information that you think would be useful to NTIA as it assesses your Broadband Mapping Project he SBDD Planning process was extremely beneficial toward preparing the plans for all the information that was needed for a balanced Comprehensive Community Infrastructure proposal. The activities and the deliverables have assisted in structuring work in the public sector that is difficult to achieve without such a process. In retrospect, the results from the efforts go much further than just the direct goals of the program. The planning and mapping activities are going to be continued as ongoing quality measurements for the viNGN network beyond the term of the ARRA SBDD program.
