April 1, 2013

Ms. Anne W. Neville
SBI Grant Program Director
National Telecommunications and Information Administration
U.S. Department of Commerce
Room 4716
1401 Constitution Avenue, NW
Washington, DC 20230

Dear Ms. Neville:

As the State Broadband Designated Entity, in partnership with the Alaska Department of Commerce, Community, and Economic Development, please accept this submission from Connected Nation on behalf of the state of Alaska's State Broadband Initiative (SBI) Grant Program, known as Connect Alaska.

Connected Nation and Connect Alaska congratulate the National Telecommunications and Information Administration (NTIA) and the Federal Communications Commission (FCC) on achieving the two-year anniversary of the National Broadband Map. Truly, now more than ever, the significance of complete and validated data through this effort is impacting lives in communities all across our great country. The Connect Alaska program and its collective stakeholder community continue to be faithful and energized contributors and we are proud to play such a part in forging the innovation economy of the twenty-first century.

The items that comprise this submission should be found to be compliant with the April 1, 2013, deadline for the semi-annual data update and in accordance with the terms of the July 1, 2009, Notice of Funds Availability (NOFA) and all subsequent clarifications pertaining to delivery of state-level mapping of broadband service availability. This packet includes:

Inventory of Deliverables, Connect Alaska: April 1, 2013

<u>NOFA Requirement</u>	<u>Data Transfer Model</u>	<u>Data Description</u>
Appendix A: 1(a)(i)	BB_Service_CensusBlock	Broadband Service Availability of Facilities-Based Providers in Census Blocks of No Greater Than Two Square Miles in Area
Appendix A: 1(a)(ii)	BB_Service_RoadSegment	Broadband Service Availability of Facilities-Based Providers by Road

Appendix A: 1(b)	BB_Service_Wireless	Segment in Census Blocks Larger in Area Than Two Square Miles
Appendix A: 3(b)	BB_ConnectionPoint_MiddleMile	Broadband Service Availability of Wireless Services Not Provided to a Specific Address
Appendix A: 4	BB_Service_CAInstitutions	Broadband Service Infrastructure Middle-Mile and Backbone Interconnection Points
Appendix A: 4	n/a	Community Anchor Institutions-Listing
VII.A.1(a)	n/a	Community Anchor Institutions-Narratives
n/a	DataPackage.xlsx	Accuracy and Verification Report
n/a	n/a	Worksheets of Contact Information, Record Count, and Provider Summary Table
n/a	n/a	List of Changes and Corrections to the Dataset
n/a	n/a	Broadband Provider Roster and Participation Status

In addition, this data update submission should be found to be compliant with the additional program requirements instituted by the National Telecommunications and Information Administration since the time of the October 2012 SBI data submission for the Connect Alaska program. Specifically, these new requirements are:

SBI Data Transfer Model

The submission of the broadband dataset for April 1, 2013, is contained within the SBI Data Transfer Model as released on the Grantee Workspace on December 14, 2012. All efforts have been made to comply with formatting, domain, and metadata requirements to include as much information on each provider as possible.

Additional Submission Guidance

On February 8, 2013, NTIA released new guidance regarding the processing of wireless data, for both fixed and mobile broadband providers. All wireless provider coverage records have been reviewed and are in compliance with this grantee guidance for this April 2013 submission period. Even providers that did not have an update for this submission cycle were reviewed and data reprocessed as necessary for those records that were not yet in compliance with the new guidance.

This submission continues to follow the speed technology guidance released by the Program Office on August 9, 2012, to review speed tier codes in correspondence with technology of transmission codes. In the October 2012 submission, descriptions were provided in the methodology paper that offered an explanation for any submitted technology of transmission and speed combinations that were outside of the expected value range. That practice continues in this submission as technology and speed combinations are reviewed

and scrutinized; any questionable information supplied by providers is reviewed more in depth with the provider to ensure the information is accurately captured or a proper explanation is provided as to why the speed information should be submitted as supplied even if it falls outside the expected value range.

This April 2013 semi-annual data update under the SBI Grant Program continues to demonstrate our dedication to implementing the joint purposes of the Recovery Act and the Broadband Data Improvement Act (BDIA) by gathering comprehensive and accurate state-level broadband mapping data, developing state-level broadband maps, aiding in the development and maintenance of the National Broadband Map, and undertaking statewide initiatives for broadband planning.

Broadband Service Availability — Provider Outreach and Verification

This data update submission under the SBI program includes datasets for 96.3 percent of the Alaska provider community, or 26 of 27 total providers. Of the 26 participating providers, 13 supplied an update to their network or coverage area(s), while 13 have reported no change. A complete roster by provider depicting participation status and contact history is contained herein. The remaining provider that is not represented in the attached datasets was non-responsive to multiple contact attempts.

As the aforementioned roster and attached methodology documentation will attest, it is the collective opinion of the Connect Alaska principals that all commercially reasonable efforts were made to account for 100 percent of the known Alaska broadband provider community, pursuant to this semi-annual data update submission.

Connect Alaska has also continued to perform broadband verification activities through several means. In addition to confirmation of service area(s) by each provider, Connect Alaska conducts field validation efforts. To date, 19 (70.37 percent) providers have been validated through field verification activities. Additional details on verification activities are contained within the Field Validation Methodology.

The Connect Alaska website, (www.connectak.org), continues to serve a prominent role in the outreach and data collection effort. This program asset provides a way for the general public to participate in the process by offering interactive tools for users to test their connection speed, submit broadband inquiries, or contact a program representative.

As an indicator of stakeholder penetration, the Connect Alaska website encountered 2,036 unique visits during this reporting period (15,083 total to date for the life of the grant awarded on June 1, 2010). Additionally, this pronounced Web activity netted 2 broadband inquiries over this same reporting period (50 grant inception to date). The website also provides access to the My ConnectView™ interactive mapping application, which allows consumers and broadband providers to confirm or dispute the coverage represented on the broadband inventory map. These consumer-initiated actions are facilitated through the Connect Alaska website and the Connect Alaska

interactive mapping tool (My ConnectView™) that offer the stakeholders the vehicles to provide information regarding availability in their respective service area, either in affirmation or contest of the reported data represented in the Connect Alaska mapping artifacts. Since the initial data collection and release of corresponding maps, feedback in the form of broadband inquiries has allowed Connect Alaska to identify additional areas that are in need of field validation, which is scheduled as soon as possible.

Community Anchor Institutions

Connect Alaska continues to make significant inroads to gather data on the location and broadband connectivity of Community Anchor Institutions (CAI), in accordance with the data requirements of the SBI NOFA Technical Appendix. This uptick in CAI data collection was further supported by NTIA's outreach to grantees reiterating the importance of this outreach. With the continued commitment of the Alaska Department of Commerce, Community, and Economic Development, we have continued to focus on a relationship-oriented approach with state-level agencies and organizations that generates more responses than general contact.

In conjunction with the Alaska Department of Commerce, Community and Economic Development, outreach was conducted during this data update reporting period by Connect Alaska to continue identification of existing, centralized sources for CAI connectivity data. Additionally, outreach was coordinated to distribute the CAI survey to institutions throughout the state through multiple methods including a customized online survey available on the Connect Alaska website. Building on past success of the September 2012 Education Campaign, February 2013 was recognized as Public Safety Month where the public safety sector was the focus of CAI data collection, research, and public affairs outreach. Connect Alaska has developed a number of new relationships with statewide associations such as Anchorage Economic Development Corporation, the North Star Volunteer Fire Department, and multiple local cities and boroughs, to promote the importance of broadband connectivity at anchor institutions and participation in this data collection process. The value of these relationships continues to impact the entire success of the Grant Program, and the CAI engagement is a logical extension of new and existing relationships. Connect Alaska will continue to build upon these new relationships over the coming months and utilize its contacts throughout the state to collect data and raise awareness of this project.

From our work in Alaska, as well as other states, we recognize the great value of this data to future collaboration efforts within the state as well as its value to the National Broadband Map. We plan to continue to bring best practices to the Connect Alaska efforts, along with an investment of both human and technical resources required to reach our goal of increasing the data that is secured and reported as part of this process.

The Connect Alaska program exists to improve data on the deployment and adoption of broadband services and to assist in the extension of broadband technology across all regions of the great state

of Alaska, as well as the United States and its territories through contribution to the National Broadband Map. We look forward to the continuing work ahead and improving upon our data collection methods.

Respectfully submitted,

Thomas W. Ferree
President and Chief Operating Officer
Connected Nation, Inc.

ALASKA COMMUNITY ANCHOR INSTITUTIONS METHODOLOGY

In this seventh reporting period of the SBI, Connect Alaska, working in close coordination with the state of Alaska, has established an ongoing mechanism for gathering data on the location and broadband connectivity of Community Anchor Institutions (CAI), in accordance with the data requirements of the SBI NOFA Technical Appendix. Since the October 2012 data submission, the CAI outreach process method has been modified to improve data collection. Specifically, the outreach process is a more focused sector-specific and relationship-oriented approach that generates more responses than general contact.

Connect Alaska has continued to identify and process CAI data obtained through an ongoing statewide outreach campaign. Physical address information continues to be augmented through manual sourcing and geocoded by Connect Alaska through Esri ArcGIS software.

Connect Alaska continues to utilize a customized online survey hosted through SurveyMonkey, with a landing page on the Connect Alaska website that was developed during the first reporting period. This survey, in combination with a customized data-gathering spreadsheet, was distributed on a regular basis to a targeted list of CAI throughout the state as well as organizations and agencies that work closely with the CAI. The distributions were completed with the support of the state client. Connect Alaska will continue to use these data-gathering tools for future targeted outreach efforts throughout the coming months leading up to the next reporting period. These materials are customized to fit the CAI categories as defined in the SBI NOFA.

The survey can be accessed at this link: <http://www.surveymonkey.com/s/YD6MFC9>.

In addition to the survey, Connect Alaska has developed a number of new relationships with statewide associations such as Anchorage Economic Development Corporation, North Star Volunteer Fire Department, and multiple local cities and boroughs, to promote the importance of broadband connectivity at Community Anchor Institutions and participation in this data collection process. It is apparent that these relationships are beneficial to the entire success of the grant program, and the CAI engagement is a logical extension of new and existing relationships. Connect Alaska will continue to build upon these new relationships over the coming months and utilize its contacts throughout the state to collect data and raise awareness of this project.

In addition to fostering and building relationships with state agencies, associations, and organizations, Connect Alaska has also developed a sector-specific calendar that supports CAI outreach as well as research and communications efforts. This focused approach allows a corporate commitment to capturing CAI data in addition to developing meaningful sector-specific content. Since the October 2012 submission, the sector-specific approach included a month-long public safety campaign in February 2013. During this campaign, Connect Alaska committed to improve relationships with key stakeholders, distribute survey requests to sector representatives, and provide sector-specific education through communications and webinar resources. Outreach to and survey of hospitals, local law enforcement, and fire stations helps build awareness and establishes a centralized database of key connectivity data for planning.

Connect Alaska conducts significant research as part of an ongoing process to identify existing, centralized sources for CAI connectivity data. In tandem with these efforts to identify existing data, Connect Alaska continues to identify key CAI contacts in an effort to distribute and promote the

online survey and raise awareness of the importance of CAI broadband connectivity. Also, when possible, Connect Alaska works with the Alaska Department of Commerce, Community, and Economic Development to identify existing relationships that can support CAI outreach.

Connect Alaska has an ongoing mission to educate CAI throughout the state on the importance of participating in the project. Participation by these institutions will raise awareness about the importance of broadband connectivity and the need to report the requested data for inclusion on the National Broadband Map.

The greatest challenge with collecting CAI data continues to be educating the CAI about the Connect Alaska project as well as self-awareness of their own broadband connectivity (specifically upload and download speeds). Connect Alaska will continue to research key CAI organizations and agency contacts in an effort to raise awareness of this project among CAI. When applicable, Alaska Department of Commerce, Community, and Economic Development will continue to be briefed on the current CAI data and provided information so it can assist with outreach and promotion within the state.

A CAI summary of all processed and submitted data is provided below:

CAI Type	Total	Physical Address	Lat/Long	Technology of Transmission	Download Speed	Upload Speed
K-12 Schools	711	711	711	426	291	280
Libraries	126	126	126	46	44	44
Healthcare	276	276	276	178	175	6
Public Safety	326	326	326	17	16	16
Higher Ed Institutions	20	20	20	8	8	8
Other Government	570	570	570	30	25	24
Other Non-Government	459	459	459	9	9	6
Total	2488	2488	2488	714	568	384

During the coming months, CAI data collection will be supported by regular reporting to the Connect Alaska team. The CAI data is proving an invaluable resource to all components of the Connect Alaska effort. The data identifies potential local champions, sector trends, and opportunities for improvement as well as opportunities to educate CAI not familiar with their current connectivity.

SBI DATA SUBMISSION METHODOLOGY

The submission of the broadband dataset for April 1, 2013, is contained within the SBI Data Transfer Model and additional components as released on the Grantee Workspace on December 14, 2012. Connected Nation (CN) has reviewed all literature that relates to the release and use of this data transfer model and recognizes that it does not replace or dictate how data is stored, processed,

or displayed for the state, as it is meant primarily as a means to transfer the broadband data from all states and territories and populate the National Broadband Map in a seamless fashion.

Connected Nation has complied with the following guidance documents published by NTIA:

- Technical Mapping Guide, as released on the Grantee Workspace on March 24, 2011, was followed to ensure the completeness and validity of the submission through completion steps and checklists, completing the DataPackage spreadsheet, uploading broadband datasets into the Data Transfer Model, and checking the dataset using the SBDD_CheckSubmission receipt process.
- Naming Conventions and Category of End User, as released on the Grantee Workspace on March 26, 2012, was followed to ensure the consistency of individual file and zip package naming.
- Wireless Data Processing Guidance, as sent to SBI grantees on February 8, 2013, was followed to ensure that all fixed and mobile wireless provider coverage records are submitted to NTIA as separate, closed polygons whenever there is a variation in any of the required fields.

In addition to the methodologies contained herein, the Changes and Corrections documentation, as well as the DataPackage.xls containing contact information, the data dictionary, and a provider summary table, the following feature classes are submitted within the SBI Data Transfer Model for the state of Alaska.

Inventory of Deliverables, Connect Alaska: April 1, 2013

<u>NOFA Requirement</u>	<u>Data Transfer Model</u>	<u>Data Description</u>
Appendix A: 1(a)(i)	BB_Service_CensusBlock	Broadband Service Availability of Facilities-Based Providers in Census Blocks of No Greater Than Two Square Miles in Area.
Appendix A: 1(a)(ii)	BB_Service_RoadSegment	Broadband Service Availability of Facilities-Based Providers by Road Segment in Census Blocks Larger in Area Than Two Square Miles.
Appendix A: 1(b)	BB_Service_Wireless	Broadband Service Availability of Wireless Services Not Provided to a Specific Address.
Appendix A: 3(b)	BB_ConnectionPoint_MiddleMile	Broadband Service Infrastructure Middle-Mile and Backbone Interconnection Points.
Appendix A: 4	BB_Service_CAIstitutions	Community Anchor Institutions-Listing.

The provider data collected by CN on behalf of the state of Alaska have been formatted per the given specifications and uploaded into the appropriate feature classes of the SBI Data Transfer Model. Wireline availability is contained within census blocks and road segments, wireless availability is contained as polygons of coverage areas, and middle-mile connections and Community Anchor Institutions are contained as point data. All speed data is contained at the census block, road

segment, or wireless polygon level of availability. All efforts have been made to comply with formatting, domain, and metadata requirements to include as much information as possible.

Connected Nation has continued outreach to satellite providers on their availability, technology, and speed information, but granular coverage is not yet available. Submitted within the wireless feature class are the satellite companies providing service to Alaska as a polygon of the state boundary. Efforts will continue to collect, process, or otherwise create more granular satellite data based on availability analyses and guidance received from NTIA. Process development continues as well to be able to create more granular satellite coverage based on satellite equipment positioning and geographic inputs.

DATASETS FOR IN-KIND MATCH

Connect Alaska received an Alaska Statewide Digital Mapping Initiative Orthoimagery dataset from the Alaska Department of Natural Resources as part of an in-kind match contribution to assist Connect Alaska with its mapping and planning goals - \$177,933 in-kind match contribution. The Department of Education and Early Childhood Development provided the Connect Alaska mapping initiative a school district speed test dataset as part of an in-kind match contribution to assist with its mapping and planning goals - \$5,000 in-kind match contribution.

ALASKA FIELD VALIDATION METHODOLOGY

CN focused a portion of its time on specific validation processes such as:

- conducting random spectrum analysis studies throughout the state using an Avcom PSA-37-XP spectrum analyzer;
- conducting mobile speed tests throughout the state using an iPhone, Android (or other smart phone) as well as provider-specific aircards (Sprint 3G/4G, Clearwire et al);
- identifying pre-selected, provider-submitted wireless transmit tower sites and cross-referencing data about that tower against the Federal Communications Commission (FCC) databases such as Antenna Structure Registration and/or the Universal Licensing System;
- cross-referencing Federal Registration Number data against available FCC Form 477 data as well as the FCC **CO**mmission **RE**gistration **S**ystem (CORES);
- validating provider submitted data (for example: latitude/longitude) using a handheld Garmin eTrex Summit GPS unit or GPS enabled software such as Microsoft *Streets & Trips*;
- locating physical wire-line attributes (such as Central Offices, Remote Terminals, CATV plant, etc.) and comparing them against provider submitted data; and
- conducting on-net and off-net speed tests using the FCC portal at <http://www.broadband.gov/qualitytest/about/> or using the Ookla Net Metrics enabled speed test utility located on each of CN's program specific websites.

Additionally, CN cross-referenced numerous public documents in order to ensure that all known broadband providers were located and contacted. This included searching membership logs from trade associations (WISPA, WCAI, PCIA, etc.), the Cable Television Fact Book, Public Utility Commission records, Public Service Commission records, Chamber of Commerce, etc.

To date, Connected Nation’s staff has conducted on-site validation tests in Alaska on the following providers: Ace Tekk Wireless Internet; AlasConnect, Inc.; Alaska Communications Systems Holdings, Inc. (d.b.a. ACS); Alaska Power and Telephone Company; American Broadband Communications (d.b.a. TelAlaska Long Distance Inc.), AT&T, Inc.; Borealis Broadband; Clearwire Corporation; Copper Valley Telephone Cooperative, Inc.; Cordova Telephone Cooperative, Inc.; Craig Cable, Futaris (formerly d.b.a. atContact Communications); GCI Internet; Hughes.net; Ketchikan Public Utilities; Matanuska Telephone Association; SPITwSPOTS LLC; Verizon Wireless; and Yukon Telephone Company.

From program initiation through this reporting period, CN has completed field validation testing against 19 companies (out of a universe of 27 viable providers) totaling 70.37 percent within the state of Alaska.

CN has also continued to review provider datasets for accurate speed information, platform listings, and other intricacies that may fall outside of the standard SBI Data Transfer Model parameters, as published on the NTIA Grantee Workspace on December 14, 2012. Any providers whose submitted coverage and attributes are anticipated to come into question have been further reviewed and confirmed; details on a case-by-case basis are presented below.

SPITwSPOTS LLC

Issue: Fixed wireless platform with maximum advertised download speed in tier 8, as well as maximum advertised upload speed in tier 8, higher than expected value range for the technology. Resolution: Provider website advertises 25 Mbps service; screenshot below. Provider confirmed that service is symmetrical, so the 25 Mbps service advertised is for both download and upload speeds.

Extreme	
15Mb Service.....	\$154 monthly
20Mb Service.....	\$205 monthly
25Mb Service.....	\$250 monthly

PROVIDER VALIDATION METHODOLOGY

Broadband providers maintain their service area data in many different formats, all in varying levels of complexity and granularity. In order to ensure that the data required by the NTIA is standardized across all providers and that it is as accurate as possible, CN translates and formats the data that providers are able to supply into a GIS shapefile and produces maps for the provider to review. The resulting map(s) and review process allow for providers to see their service area in a geographic

format – for some providers, this is the first time they have seen maps of their broadband service area. Having the mapped service area allows providers to quickly identify any issues that appear in the data representation, whether the issue is in the data translation into a GIS format or from the original data collection and submission. Often data is provided from various sources and through the review and revision process, local engineers who operate the networks and work in the field are able to ensure that the tabular data that has been submitted is accurate and represents the real-world network extent. Any issues in how the service area is represented on the map(s) are remedied by CN, whether they are additions, removal of service, or any other revisions. Revised maps of service area representations are sent to the provider for review and approval; CN will revise data and return maps as many times as necessary until the provider is in agreement that the map represents their service area as accurately as possible. Once the review process has been completed and final approval of the data is provided, the data is deemed ready for NTIA submission.

Once the data collection has been aggregated at a statewide level, static maps of statewide and borough-level availability are produced and made publicly available. In addition, consumers can visit the interactive online tool, My ConnectView, to create customized views of broadband service areas and analyze corresponding demographic information. Leveraging broadband service data on various platforms allows for public users, providers, and other stakeholders to review, scrutinize, and provide feedback on the represented data. This feedback becomes a validation method in itself, as consumers submit inquiries to CN either affirming where service is not available or identifying areas where broadband service is shown on the map, but in actuality is not available. This allows for a follow-up to providers regarding revisions to the data as it is represented; it also allows for CN to identify locations where on-site visits may be necessary to complete field validation of available services. Public feedback on all forms of mapping products serves as a localized validation method for provider-supplied information and allows CN to resolve inaccuracies as they are identified to ensure that only the highest quality information is provided to stakeholders.

Estimates derived from provider-validated data indicate that approximately 6.03 percent of Alaska households do not have terrestrial fixed broadband service available, and approximately 4 percent of Alaska households have neither mobile nor fixed broadband service available.

Within rural areas of the state, results derived from provider-validated data indicate that approximately 11.72 percent of rural Alaska households do not have terrestrial fixed broadband service available, and approximately 8.05 percent of rural Alaska households have neither mobile nor fixed broadband service available. Please note that the availability estimates presented are based on Census 2010 household information.

The estimates above, in accordance with NTIA's definition of available broadband service as specified in the SBI NOFA, include broadband service with download speeds of at least 768 Kbps and upload speeds greater than 200 Kbps.

In addition, due to the nature of the SBI data collection methodology as defined by the NTIA and based on both census block geographic units and street segment data, the estimates of broadband availability derived from provider-validated data may include an overstatement of the actual number of households with broadband availability. Under the census block-based data collection method, a provider will typically report broadband availability for an entire census block whether its network is

present across the whole or only a subset of that census block. This potential overestimation at the census block level can be amplified as the data is aggregated across the entire state.

WIRELESS METHODOLOGY

Broadband Service Availability in Provider's Service Area Wireless Services Not Provided to a Specific Address

Data solicited from a fixed wireless provider to create propagation models include, but are not limited to:

1. The name of the structure.
2. Whether the transmitting device is operational or proposed.
3. The maximum advertised downstream speed, the maximum advertised upstream speed.
4. The typical downstream speed, the typical upstream speed (peak periods for both).
5. The frequency range of spectrum being used (as prescribed by NTIA). This may include (but is not limited to) spectrum authorizations identified within the Federal Communications Commission (FCC) Universal Licensing System (ULS) database or located on the FCC's Spectrum Dashboard.
6. The primary population center(s) being served (for geopolitical boundary reference).
7. The physical address of the transmit site (in the event latitude/longitude is unavailable from the provider this allows a quick reference point for geocoding).
8. Latitude in either Degrees, Minutes, and Seconds and/or in Decimal Degrees (typically received as NAD 27 or NAD 83).
9. Longitude in either Degrees, Minutes and Seconds and/or in Decimal Degrees (typically received as NAD 27 or NAD 83).
10. Antenna pattern (e.g. omnidirectional, 180°, 120°, 90°, etc.).
11. Azimuth of antenna (e.g. 360° with magnetic declination if known).
12. Approximate transmit radius (in feet, miles, or kilometers).
13. Polarity of transmit antenna (Vertical or Horizontal).
14. Transmit antenna gain (in dBi).
15. Line loss (applicable only to providers using coax, heliax, waveguide or other forms of cabling – excludes power-over-Ethernet devices).
16. Mechanical and/or Electrical beam tilt (if applicable).
17. Equipment Manufacturer (allows easy cross-reference against manufacturer's specification sheet).
18. Power output of the transmitting device (if unknown, FCC standards or manufacturer specifications are applied).
19. AMSL at base of tower site.
20. Antenna centerline AGL (height of antenna above ground level measured at the centerline of the actual antenna).

21. Foliage factors (Evergreens/Deciduous and percent of ground cover).
22. Ground Clutter (primarily used in rural areas to account for foliage and in metropolitan areas to account for types and heights of buildings if known).
23. Average gain of receive antenna.
24. Receive antenna is estimated at height above average terrain (HAAT) of 6.2 meters/20 feet.
25. Federal Registration Numbers (if applicable) which may allow opportunities to cross-reference and/or obtain additional data from the FCC's ULS and the **CO**mmission **RE**gistration System.

Propagation modeling combines scientific data and empirical mathematical formulation for the characterization of radio wave propagation as a function of frequency, distance, and other conditions. Propagation software(s) typically use the Irregular Terrain Model (also known as Longley-Rice) of radio propagation for frequencies between 20 MHz and 20 GHz. This model is based on electromagnetic theory and statistical analyses of the combination of terrain features and radio measurements, then predicting the median attenuation of a radio signal as a function of distance and the variability of the signal in time and in space. For metropolitan areas, the software can typically be adjusted to use the Okumura-Hata model, which accounts for predicting the behavior of cellular transmissions in areas where buildings are the primary obstructions. The resulting product from either model depicts a graphical illustration of the theoretical propagation characteristics of a selected frequency range based on defined variables (receiver sensitivity of the home/mobile device, foliage factor, and digital elevation terrain input).

After converting propagation models into a geospatial format, additional processing is completed to remove the small pixels representing service present in the resulting dataset. These areas are initially created based on the parameters entered in the software from the provider equipment information, the underlying data parameters of elevation, hill shade, etc., and the limitations of the software itself to display a broadband service area as accurately as possible. Generally, these random pixel striations appear as a result of signal levels reaching the highest elevated points within the prescribed radius. Typically, while this pixilation anomaly shows legitimate areas where signals can be received, these highly elevated points may have exceedingly sparse populations or are entirely void of population. As a result, and congruent to the *Wireless Technology Methodologies and Business Logic* white paper submitted to NTIA on January 20, 2011, all independent pixels representing service that are less than 0.125 square miles in area have been removed from the geospatial representation of each wireless provider.

BROADBAND INQUIRIES METHODOLOGY

CN collects consumer feedback in the form of broadband inquiries (BBIs). These inquiries represent any type of communication received from the public regarding broadband service. Once BBIs are received across the state, this information is overlaid with the broadband availability information which was collected through the SBI program. This allows for a real-world comparison of the broadband landscape to the information received from broadband inquiries. Consumers submitting

these inbound comments and/or inquiries are able to provide information regarding five categories: 1) residents who do not have broadband but want it; 2) residents who have broadband but want a different provider; 3) residents who do not have broadband, but the broadband inventory maps indicate that they do; 4) residents who have broadband but want a faster connection speed; and 5) residents who have broadband but want a less expensive service option.

BBIs are submitted frequently by consumers via the Connect Alaska website. Inquiries often seek help to identify local broadband provider options, or to learn when a specific provider may be able to provide service to that consumer. Consumer comments also provide information which may help modify maps with actual service area information. The primary objectives of CN regarding these inquiries are 1) to improve the accuracy of the state maps with submitted consumer information and follow-up field research; 2) to provide broadband options to consumers through cooperation with mapped providers and by facilitating new broadband service options; and 3) to map and analyze information from consumers about areas of unmet broadband demand and alternatives to currently mapped services. A prime example of the second option is the utilization of the Rural Utility Service satellite eligibility tool. By simply entering the consumer's address, the CN engineer can quickly determine if the consumer meets the initial qualification status for BIP satellite subsidies.

New BBIs are assigned to either the GIS department or the Engineering & Technical Services (ETS) team depending on the category entered by the consumer on the website submission form. The GIS or ETS team members respond to each inquiry according to the information entered by the consumer. Many BBIs can be resolved through desktop research; however, if a BBI requires research in the field, the assigned ETS team member conducts such research when performing field validations in the area of the inquiry, or at another such time as is practical and appropriate. GIS and ETS team members respond to and conclude BBIs via telephone contact and/or e-mail communication.

The broadband inquiry process has been implemented in each of the CN state programs with successful results. Altogether CN has received over 18,839 broadband inquiries since 2007, allowing the state programs to evaluate each inquiry for broadband demand and data verification. These inquiries are continuously examined against current broadband availability, updated every six months, to determine if previously unserved households have been expanded to and can now receive broadband at their residence. This database of broadband inquiries has also allowed the CN state programs to aggregate demand in concentrated areas to show providers the exact locations where the population has made it clear that they would purchase broadband if it was made available to them. Providers in the states have responded to this process and have expanded to areas knowing that their investment will be worthwhile. Data verification methods have also proven successful, as the state programs have been able to show those inquiries that indicate the broadband service areas are misrepresented on the map to providers, who then verify where service cannot reach in regard to that residence(s). The broadband coverage in these states has been altered to create a more accurate map based on the inquiries submitted by the public.

During this reporting period, the Connect Alaska project has received a total of 2 inquiries (50 grant inception to date). As more inquiries are submitted to Connect Alaska, a more thorough validation of the broadband landscape can be performed, while also allowing providers to see which areas have a high demand for broadband adoption.

MY CONNECTVIEW METHODOLOGY

My ConnectView is an interactive online mapping tool for viewing, analyzing, and validating broadband data. Developed using Esri's ArcGIS for Server and Adobe's Flex Framework and hosted and maintained by Connected Nation, My ConnectView is a multi-functional, user-friendly way for local leaders, policymakers, consumers, and technology providers to devise a plan for the expansion and adoption of broadband.

First and foremost, My ConnectView allows consumers to locate their residence and identify providers that offer broadband Internet service to that location. The interactive platform allows for users to build and evaluate broadband expansion scenarios using a wealth of data, including several coverage analysis layers, speed analyses, Community Anchor Institutions, and tools to search and export household demographic information, as well as extract data in GIS, spreadsheet, and/or PDF formats.

My ConnectView also features more interactive data layers and additional tools than ever before to allow the consumer to explore the broadband data. My ConnectView provides consumers with the ability to print, e-mail, and provide feedback on the broadband data displayed on the interactive map. Through the collection of this feedback, a visual demand for broadband is presented. This visualization allows the CN state programs the ability to validate the broadband availability for accuracy. If residents within a region state they are without broadband, but the interactive map shows otherwise, this allows CN to approach the providers within that area in an effort to trim down their coverage to more accurately represent real-world availability on the ground.

The Connect Alaska project launched My ConnectView on April 2, 2012, and has received 582 visits this reporting period; to date the interactive mapping application has received 2,582 visits.

SPEED TEST METHODOLOGY

The 240 speed tests that are represented in the Connect Alaska Speed Test Report during this reporting period (2,642 grant inception to date) are the result of a partnership between CN and Ookla Net Metrics. Utilizing this relationship increases the level of confidence in the data being collected and provides for a far greater sample size than could be collected by a single testing site.

Ookla owns and operates Speedtest.net, as well as develops and deploys speed tests, such as the Connect Alaska speed test website, for partners around the world. This network of sites that is developed and run on its testing technology provides Ookla with a vast dataset that, due to the variability of geographic information collected across the varying speed test sites, is geocoded

utilizing Geo-IP technology. This technology allows for tests to be geocoded to points of aggregation, typically larger nodes across provider networks. While there are hundreds of thousands of tests that have been conducted, the level of aggregation is only sufficient for borough-level detail due to the test results being located at these larger nodes and not at an absolute location for each speed test.

In an effort to validate broadband data from the Connect Alaska project, speed test information is collected throughout the state. Speed tests provide speed information on the path taken through all networks (a provider's network as well as additional networks) a local machine must connect to in order to reach the host test. The benefit of this collection of speed information is two-tiered. First, it allows for a comprehensive dataset of speeds, while also providing Connect Alaska with the information on where broadband services are available. Second, unlike theoretical speed information which may be received through the data collection process, the use of speed tests provide real-world information on the speeds that currently exist within the state of Alaska.

PROVIDERS DEEMED NON-VIABLE

The following list of companies represents the remainder of the broadband provider universe that was originally identified as complete for outreach to begin for the State Broadband Initiative. These providers are not included in the Data Package for the April 2013 submission because they have been deemed non-eligible under the parameters and guidance of the SBI grant program. This list of companies includes, but is not limited to: providers offering service but below the current definition of broadband, those that have gone out of business, technology consulting firms, infrastructure or network construction companies, non-facilities based general resellers, etc.

	Company Name	URL	Comments
1	650Net	http://www.650net.net	Website references emergency food items.
2	AAA Internet Service	http://aaainter.net/dsl	Dial-up service with nonfacilities-based DSL. Does not offer in Alaska on searches.
3	Access123.net	http://www.access123.net	Not a broadband provider; website directs to adult content.
4	ACERX.NET	http://acerx.net	Nonfacilities-based reseller of 13 national companies with cable, DSL, and mobile wireless applications.
5	Airewaves Broadband, LLC	www.airewaves.com	Airewaves website is an audio-based web service.
6	Alaska Wireless Cable	n/a	Provider is no longer in business; URL is inactive.

7	Alaska Wireless Systems	n/a	Provider is no longer in business; URL is inactive.
8	Angoon Cablevision	n/a	Provider is no longer in business; URL is inactive.
9	Broadband National	http://www.broadbandnational.com	Nonfacilities-based reseller of 30 national companies with cable and DSL applications.
10	Bush-Tell Inc.	n/a	Per CSR, they are local exchange services only; no website.
11	Camino-Net Internet Services	http://www.camino-net.com	No longer in business; phone and website are both inactive.
12	Circle Telephone Co.	n/a	Per CSR, they are local exchange services only; no website.
13	Communications Unlimited	http://www.cuicable.com/	Communications services company; does not provide broadband.
14	Core Communications	http://www.corecomm.us/	Printer and visual communications supplier.
15	deluxehost.com	http://deluxe-host.com	Company delivers web hosting services.
16	Denali Wireless Television	http://www.denalitelevision.com/	Nonfacilities-based web engine reseller for multiple companies.
17	DGUI	http://www.dgui.com/	No longer in business; phone and website are both inactive.
18	Dialer.net	www.dialer.net	England-based, international pay-as-you-go mobile wireless and hot spot reseller.
19	DTS-NET.COM	http://www.dts-net.com/	Non-facilities based reseller.
20	Echostar	http://www.echostar.com/	Does not provide service in Alaska.
21	Eyecom Cable	www.telalaska.com	Subsidiary company of Tel Alaska and Eyecom; does not provide broadband service.
22	Freedom Internet	http://freedominternet.net/	Dial-up services only.
23	Haines Cable TV	http://www.hainescable.com/	Company offers cable TV services only.
24	High Frequency Wireless	http://www.hfwireless.com/	Company is a reseller of GCI services and Clearwire and is an electronics repair depot.
25	Hoonah.Net	n/a	Information located on company is not viable; phone number inactive.

26	ICE Communications	http://www.ice-com.net	Information located on company is not viable; phone number inactive.
27	Imbris, Inc.	http://www.imbris.com	Foreign website should be removed.
28	IMGISP.NET	http://www.imgisp.net/	Could not locate any information on company.
29	Incredible Networks	n/a	Could not locate any information on company.
30	Interactiveinfo.com Inc.	http://interactiveinfoservice.com/	Performs internet search services.
31	iRadical	n/a	Could not locate any information on company.
32	ISPartner.net	n/a	Could not locate any information on company.
33	LCSisp.com	http://www.lcsisp.com/index.cfm	Could not locate any information on company.
34	Level 3 Communications, LLC	www.level3.com	Does not provide service in Alaska.
35	Lou's TV & Satellite Service, Inc.	http://www.lousatellite.biz/	Reseller of Wild Blue services.
36	MainBoard	http://www.mainboard.cc/internet.htm	Offer dial-up and a nonfacilities-based reseller of DSL, cable, and wireless.
37	Maine Cable and Wireless	http://www.mainecableandwireless.com	Could not locate any information on company.
38	Marcin Company	n/a	Could not locate any information on company.
39	MCI Communications Services, Inc.	http://www22.verizon.com/	Acquired by Verizon Communications, Inc. However no services available in Alaska.
40	Microcom	http://www.microcom.tv/	Reseller of Hughesnet, Starband, and Spacenet.
41	Millenicom Inc.	http://www.millenicom.com	Reseller of 3G and 4G mobile wireless services.
42	Mitkof.net	n/a	Information located on company is not viable; phone number inactive.
43	Nanomega.Com	www.nanomega.com	Information located on company is not viable; phone number and URL inactive.
44	NetAccess, Inc.	http://www.nas.net/	Canada business only provider with an array of services.

45	NetSpeed Online	http://www.netspeed-online.net	Could not locate any information on company.
46	Nook Net	n/a	Information located on company is not viable; phone number inactive.
47	Overarch Broadband	http://www.overarch.com	Provider does not offer service in Alaska; provides services in Treasure Valley, Idaho.
48	Pacific Internet Exchange	http://www.pie.us/	Provider is a web hosting company.
49	PremoWeb	http://www.premoweb.com/about_us/contact_us.html	Dial-up services only.
50	Qwest Communications Company, LLC	www.qwest.com/	Provider acquired by CenturyLink. CenturyLink does not provide service in Alaska.
51	Sea Lion International, LLC	http://www.sealioncompanies.com	Provider funding was rescinded and there are no plans for project SABRE going forward.
52	Simply Dialup A Metrogeek Company	http://www.simplydialup.com	Dial-up services only.
53	Skagway Cable TV	www.hainescable.com	Cable TV services only.
54	SkyFrames	http://www.skyframes.com	Information located on company is not viable; phone number and URL inactive.
55	Smith Cable Systems	n/a	Company is a contractor for the installation of cable; no ISP operations.
56	Surferz.Net	http://www.surferz.net	Website manager and developer.
57	The Summit Telephone and Telegraph Company of Alaska, Inc.	n/a	Provider does not meet the broadband speed requirements in either upload or download.
58	Total Access Networks, Inc.	http://www.totalaccess.net	Supplies in-home solutions for multiple types of home networking and other types of services.
59	TransAria	http://www.transaria.net	Website points to backhaul provider, Cutthroat Communications which recently sold to Blackfoot Telecommunications group which serves Montana.
60	TSISP.NET	www.tsisp.net	Information located on company is not viable; phone number inactive.
61	University Corporation for Advanced Internet Development	n/a	Nationwide GBit network for anchor institutions; network under testing and construction; no website found.

62	VPM Global Internet Services, Inc.	http://www.vpm.com	Reseller of HughesNet services.
63	Wireless Roanoke, Inc.	http://www.wirelessroanoke.com	Information located on company is not viable; phone number and URL inactive.
64	wisbin	http://www.wisbin.com	Reseller of DSL Internet service in Wisconsin; does not serve Alaska.
65	www.AmericanAngel.us	http://www.americanangel.us	Information located on company is not viable; website is a social website.
66	YEYZOO.NET	http://t1.vedy.net	Provider is a nonfacilities-based reseller of backhaul.
67	YLISP (Your Local ISP)	http://www.itsyournet.com	Website hosting and development services.

APPENDIX A: BROADBAND PROVIDER LOG

Broadband Provider Log

Complete	41
Non-Responsive/Refused	1
In Progress	0
Reseller Providing Data	0
Count of Datasets by Status	42
Total Unique Providers Represented	27

Provider Name	Platform	Status	NDA Execution Date	Notes
Alaska Communications Systems Holding, Inc. (ACS)	Mobile Wireless	Data Added to Statewide Inventory	6/2/2011	[FEB-20-13 Brian Dudek] Change: Provider added 4G network around Anchorage, Fairbanks and Juneau. Slight expansion of 3G; most noticeably around Kodiak.
AT&T Corp, Inc.	Mobile Wireless	Data Added to Statewide Inventory	12/16/2009	[FEB-25-13 Brian Dudek] Change/Correction: Possible service expansion or corrections to previous dataset; entirely new dataset provided for April 2013 submission. There is notable expansion around Healy, Ninilchik, Prudhoe Bay, and west of Fairbanks. Also added 4G services in the Anchorage area.
Bristol Bay Telephone Cooperative, Inc.	DSL	Data Added to Statewide Inventory		[FEB-26-13 Brian Dudek] Correction: New provider platform for April 2013 submission in which the provider previously did not meet speed requirements.
Copper Valley Telephone Cooperative, Inc.	DSL	Data Added to Statewide Inventory	1/11/2010	[MAR-07-13 Brian Dudek] Change/Correction: Provider changed and corrected their coverage along with their speeds across entire coverage area. These values are based on distance from CO or RT. Additional RT's added.
Cordova Telephone Cooperative, Inc.	Fixed Wireless	Data Added to Statewide Inventory		[FEB-06-13 Brian Dudek] Change: New provider platform for April 2013 submission.
Cordova Telephone Cooperative, Inc.	Mobile Wireless	Data Added to Statewide Inventory		[FEB-06-13 Brian Dudek] Change: New provider platform for April 2013 submission that previously did not reach broadband speeds.
GCI Internet	Cable	Data Added to Statewide Inventory	2/25/2010	[FEB-28-13 Brian Dudek] Change/Correction: Provider expanded cable territory into Kotzebue and some other areas. Upgraded infrastructure in the Anchorage area and now offers max advertised speed of tier 9 download and tier 5 upload. Reduced Petersburg coverage.
GCI Internet	Fixed Wireless	Data Added to Statewide Inventory	2/25/2010	[FEB-27-13 Brian Dudek] Change/Correction: Majority of Terra SW communities now online. Additionally, refined propagations of communities that were submitted previously.
Matanuska Telephone Association, Inc.	DSL	Data Added to Statewide Inventory	6/15/2010	[JAN-08-13 Brian Dudek] Change: Provider expanded DSL territory in southern Point Mackenzie CDP. Increased max advertised download speed to tier 7 in south Buffalo Soapstone CDP.
Nushagak Electric & Telephone Cooperative Inc.	Cable	Data Added to Statewide Inventory		[FEB-26-13 Brian Dudek] Change: New provider for April 2013 submission in which the provider previously did not meet broadband speeds.
Nushagak Electric & Telephone Cooperative Inc.	DSL	Data Added to Statewide Inventory		[FEB-26-13 Brian Dudek] Change: New provider for April 2013 submission in which the provider previously did not meet broadband speeds.
Skycasters	Satellite	Data Added to Statewide Inventory	10/16/2012	[OCT-29-12 Brian Dudek] Correction: Initial submission of provider's coverage, but they were in service previously.
Alaska Communications Systems Holding, Inc. (ACS)	Backhaul	Backhaul Provider Only Processing Complete	6/2/2011	
Futaris Inc.	Backhaul	Backhaul Provider Only Processing Complete		
Ace Tekk Wireless Internet	Fixed Wireless	Speed Only Update; Data Processing Complete		[JAN-28-13 Brian Dudek] Change: Provider upgraded infrastructure and increased max advertised download and upload speeds to tier 4.

Copper Valley Telephone Cooperative, Inc.	Mobile Wireless	Speed Only Update; Data Processing Complete	1/11/2010	[JAN-18-13 Brian Dudek] Change: Provider upgraded infrastructure and increased download speeds throughout service area. Upload speeds increased in majority of service area.
Cordova Telephone Cooperative, Inc.	DSL	Speed Only Update; Data Processing Complete		[FEB-05-13 Brian Dudek] Change: Provider upgraded infrastructure and increased max advertised download and upload speeds to tier 6.
Hughes Network Systems, LLC	Satellite	Speed Only Update; Data Processing Complete	2/5/2010	[MAR-06-13 Brian Dudek] Change: Provider upgraded infrastructure and increased max advertised satellite speeds to tier 7 download and tier 4 upload.
OTZ Telephone Cooperative, Inc.	DSL	Speed Only Update; Data Processing Complete		[FEB-13-13 Brian Dudek] Change: Provider upgraded infrastructure and increased max advertised download speed to tier 4.
Adak Eagle Enterprises, LLC	DSL	No Update to Provide	12/22/2009	
Adak Eagle Enterprises, LLC	Mobile Wireless	No Update to Provide	12/22/2009	
AlasConnect, Inc.	Fixed Wireless	No Update to Provide		
Alaska Communications Systems Holding, Inc. (ACS)	DSL	No Update to Provide	6/2/2011	
Alaska Power & Telephone, Inc.	DSL	No Update to Provide	2/26/2010	
Alaska Power & Telephone, Inc.	Fixed Wireless	No Update to Provide	2/26/2010	
American Broadband Communications	DSL	No Update to Provide	6/7/2010	
Borealis Broadband Inc.	Backhaul	No Update to Provide	2/1/2010	
Borealis Broadband Inc.	Fixed Wireless	No Update to Provide	2/1/2010	
Clearwire Corporation	Fixed Wireless	No Update to Provide	3/3/2010	
Craig Cable TV, Inc.	Cable	No Update to Provide	7/27/2010	
GCI Internet	Backhaul	No Update to Provide	2/25/2010	
GCI Internet	Mobile Wireless	No Update to Provide	2/25/2010	
Ketchikan Public Utilities	DSL	No Update to Provide	1/8/2010	
Ketchikan Public Utilities	Fiber	No Update to Provide	1/8/2010	
Ketchikan Public Utilities	Fixed Wireless	No Update to Provide	1/8/2010	
Kodiak Kenai Cable Company	Backhaul	No Update to Provide	2/7/2011	
Spacenet, Inc.	Satellite	No Update to Provide		
SPITwSPOTS LLC	Fixed Wireless	No Update to Provide		
ViaSat, Inc.	Satellite	No Update to Provide	1/8/2010	
Yukon Tech Inc	Fixed Wireless	No Update to Provide	6/23/2010	
Yukon Tech Inc	Cable	No Update Provided – Use Last Submission Data	6/23/2010	
Arctic Slope Tel. Assn. Coop. Inc.	DSL	Non-Responsive to Multiple Attempts		In addition to multiple contact attempts made during a previous mapping submission period, 7 contact attempts were made this period.
