Total provider cour Alabama dataset o	10d. If so, describe the discussions to date with each of these providers and the current status Total provider count and the status of each provider was supplied in the datapackage.xls file submitted with the complete Round 3 Alabama dataset on April 1, 2011. Only two providers in Alabama have declined to participate in the program						complete Round 3				
contact them with e **Castleberry Com	each new rour munications l	nd of da nc.: De	clined to Participate ata collection, but the clined to Participate - ata collection, but the	y ha this	ve not changed thei provider has declin	r positio ed to pa	n. Irticipate in th				
The remaining providers either participated in the Round 3 data collection effort or were non-responsive to our data requests (but did not formally decline to participate). 10e. If you are collecting data through other means (e.g. data extraction, extrapolation, etc), please describe your progress to date and the relevant											
In each data collec third party sources	activities to be undertaken in the future In each data collection round, the LinkAMERICA team verifies and augments provider data with coverage and speed information from third party sources. We do not substitute third party information for provider-supplied information unless we can independently verify that the provider information is incorrect. More often we use discrepancies to identify areas where further investigation is required.										
If providers do not submit data, but we are able to verify infrastructure information through other sources, we use common engineering principles to estimate coverage and speed. 10f. Please describe the verification activities you plan to implement In each data collection round, the LinkAMERICA team uses consistent data verification procedures. These procedures are common to all four LinkAMERICA states. As previously described, we believe verification can be segmented into four distinct categories/activities:											
identify obviously a area boundaries w	** Third Party Data Comparison: As data arrives from providers we compare submissions against several commercial data sources to identify obviously anomalies or areas for further investigation. An example would be the comparison of an ILECs reported coverage area boundaries with the legal exchange areas shown in the commercial ExchangeInfo data product. Coverage footprints of wireless providers are compared against AmericanRoamer databases - this process occurs with each data collection round										
maps and docume download. We ask	nts are develo providers to v	ped fro erify ar	and other documen om each provider's pr nd/or correct the cove ach data collection ro	evio erage	us submission and a	are post	ed on our se	cure pro			

** Data Format Verification: Proprietary and NTIA-supplied scripts are run against the dataset prior to submission to ensure the data is properly formatted and will be fully received upon submittal - this process occurs with each data collection round

** Consumer Feedback/Verification: The ConnectingALABAMA interactive map contains a user feedback mechanism that identifies the precise coordinates of each point of feedback. As more user feedback arrives, we are able to examine this data to identify and investigate areas where consumer feedback conflicts with provider information - this process occurs with each data collection round 10g. Have you initiated verification activities? •Yes

10h. If yes, please describe the status of your activities

In each data collection round, the LinkAMERICA team uses consistent data verification procedures. These procedures are common to all four LinkAMERICA states. As previously described, we believe verification can be segmented into four distinct categories/activities:

** Third Party Data Comparison: As data arrives from providers we compare submissions against several commercial data sources to identify obviously anomalies or areas for further investigation. An example would be the comparison of an ILECs reported coverage area boundaries with the legal exchange areas shown in the commercial ExchangeInfo data product. Coverage footprints of wireless providers are compared against AmericanRoamer databases - this process occurs with each data collection round

** Provider Validation: PDF check maps and other documents are produced at the beginning of each data collection round. These maps and documents are developed from each provider's previous submission and are posted on our secure provider portal for download. We ask providers to verify and/or correct the coverage and speed information shown on the map and to add new coverage information - this process occurs with each data collection round

** Data Format Verification: Proprietary and NTIA-supplied scripts are run against the dataset prior to submission to ensure the data is properly formatted and will be fully received upon submittal - this process occurs with each data collection round

** Consumer Feedback/Verification: The ConnectingALABAMA interactive map contains a user feedback mechanism that identifies the precise coordinates of each point of feedback. As more user feedback arrives, we are able to examine this data to identify and investigate areas where consumer feedback conflicts with provider information - this process occurs with each data collection round 10i. If verification activities have not been initiated please provide a projected time line for beginning and completing such activities In years 3-5 we have budgeted for the following additional verification activities:

** Mobile Wireless Broadband Drive Testing: This process will use a special device from a vendor to test signal strength and bandwidth/throughput on multiple mobile wireless signals at the same time. This technology will be used in areas where there is a large discrepancy between provider-reported coverage/speed and consumer-reported coverage/speed to determine the actual coverage and speed characteristics - commences in early 2012.

** Mobile Wireless Crowd Sourced Testing: This process will use a proprietary smart phone app, provided by a vendor, to constantly check signal strength and bandwidth/throughput on the user's mobile phone. The application will be available on multiple phone platforms and will be downloadable by consumers in each LinkAMERICA state. It runs in the background on the consumer's phone and does not impact phone performance. Data is sent from the vendor to LinkAMERICA for use in validating provider coverage and speed reports - commences in early 2012.

Staffing

10j. How many jobs have been created or retained as a result of this project?

In Q1 2011 SBDD funding resulted in 2.51 FTEs at the Prime Recipient level and 1.02 total FTEs at the Subrecipient level - for a total of 3.53 FTEs.

10k. Is the project currently fully staffed? OYes ONo

10I. If no, please explain how any lack of staffing may impact the project's time line and when the project will be fully staffed

N/A

10m. When fully staffed, how many full-time equivalent (FTE) jobs do you expect to create or retain as a result of this project?

we anticipate staffing to equal 4.02 upon completion of the project.

10n. Staffing Table
